

## EDITORIAL NOTE

Amelia Zafra\*

*Department of Computer Science and Numerical Analysis, University of Cordoba, 14071, Cordoba, Spain*

I am pleased to introduce the Issue 1 of volume 2 of International Journal of Automation, Artificial Intelligence and Machine Learning (IJAAIML). The journal established recently published its first volume at the end of 2020 and now, according to the scheduled, it is publishing this first issue of the second volume. Although, it is just the beginning, this journal aspires to be a relevant, accessible, integrative and challenging journal. It is important to highlight that all articles of this journal are included in Research Lake journals. That it is, they are completely open access, published under the terms of a Creative Commons license.

Main objective of IJAAIML is to publish both high-quality and original research and relevant and insightful reviews from the fields of artificial intelligence landscape supervised, unsupervised, ensemble techniques, application of neural networks and deep neural networks, application of deep learning to computer vision and natural language processing, robotic automation and newly developed cross-disciplinary studies that exhibit intelligent autonomous behavioural characteristics.

With this new issue, readers can particularly notice progress made to knowledge in the artificial intelligence and machine learning field. So important problems as COVID-19 prediction that has presented one of the greatest challenges in recent times or car parking availability prediction that allows to reduce the emission of carbon and air pollution being one of the sustainable development goals are included in this topic. Also, recommendation system that may guide to the student to improve his/her area of weakness and the introduction of digital transformation and transformation towards AI-power in the banks make a substantial contribution in this field.

In closing, I take this opportunity to acknowledge the contribution of managing editor, Dr. Anke Berger, during the final editing of articles published and the support provided by the editorial assistants. Lastly, I would like to express my gratitude to all the authors, reviewers, editorial team, volunteers and readers for their service and support of this journal. I look forward to their invaluable support for the successful release of upcoming volume and issues. Needless to say, any relevant work that you wish to submit is much appreciated and will make a substantive contribution to the development and success of this journal.
